

## ATELIER OH

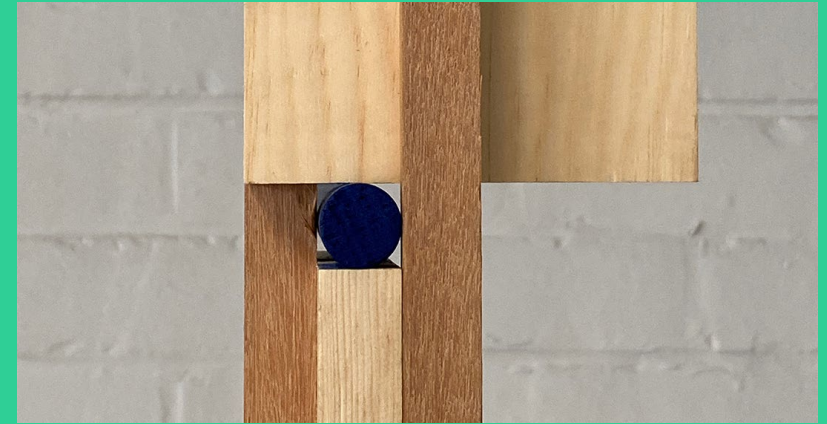

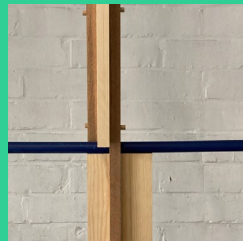

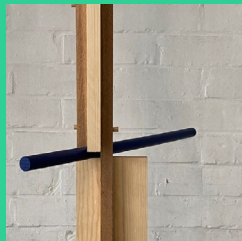

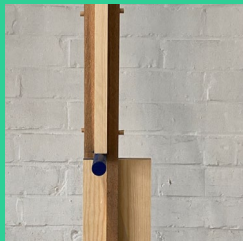

York Bing Oh. Architect and carpenter. B.A. (Architecture) NUS (Singapore), MSc (Architecture) TU Delft (Netherlands). In 2020, he officially started his own practice, Atelier Oh. The projects of the atelier include architecture competitions, interiors, furnitures, exhibition design and installations. As a carpenter, he builds the furnitures that he designs for commissioned projects and for development of prototypes. He collaborates frequently with other architects, designers, artists and makers.

## CORNER/CENTER-PIECE/POST

Corner piece. Center post. Corner post. Center piece.

3 wooden planks turn 90 degrees along the center axis and make corners. A round rod situated comfortably between wooden planks makes a strange detail. As a center piece, it looks awkward, seemingly in search of a corner. As a corner piece, it looks like a post that wraps around the corner. A piece which referred to practical details but which evades a defined practical use.

The basic detail is derived from looking at the door jamb (with a door stop) detail, basically a thin strip attached to a plank that 'stops' the door. But in this case, the 'door stop' is mirrored diagonally, holding the planks in between. The planks are rotated 90 degrees and creates 'corners'. It is like a door jamb that turns a corner. In between the planks, a rod is inserted which further expressed the movement of the x, y axis.

Materials:  
New and re-used wood from previous projects.  
Profiles found in the stack of wood.
